v9.0 CourtsOnline Application Release Notes

What's New in v9.0?

Backend/Server Side Redundancy – Our backend service infrastructure has been fully upgraded with state of the art infrastructure residing in new high availability co-location facilities. V9.0 will allow a simple migration of the client application to connect to these new backend facilities without interruption and enable full redundancy, improved bandwidth/throughput and failover.

Windows 7 64 bit Compatibility – The CourtsOnline application v9.0 is compatible with Windows 64 bit Operating Systems. Users can run reports on Windows 7 and find a new reports folder under the Windows 7 file structure.

Accounting: Require Client ID Code Option – Customers can request Intrievex to make this field required before user(s) can perform a search allowing our customers to track costs by Accounting Code for internal and external purposes. If a company would like to require this field before processing, simply send Intrievex an email to support@intrievex.com with your Intrievex Account/Customer Number and we will enable the requirement. Users will not be able to turn off the feature even though the option to select this feature is in the Menu under View/Options Preferences or F2. The costs on the invoices will be itemized by user with the Client ID Code detail.
